INTRODUCTION

Those who work with language know that there is no such thing as a true "synonym." Even though the meanings of two words may be the same — or nearly so — there are three characteristics of words that almost never coincide: frequency, distribution, and connotation. *Panthera leo* and *lion*, *cucurbit* and *squash*, *sodium carbonate* and *washing soda* have quite different frequencies in English. We all know that a *house* is not a *home*, that not all *women* are *ladies*, that not all *men* are *gentlemen;* at a more subtle level, we soon learn the differences between *motherly* and *maternal*, *fatherly* and *paternal*, *brotherly* and *fraternal*. These are connotative differences.

It is a curiosity of English that it continuously acquires words from other languages to expand its lexicon. Observers have often noted that even if a new coinage or a loanword from another language starts out with "exactly" the same meaning as an existing word in English, the meanings begin to drift apart before very long, one acquiring quite different frequency, distribution, and connotation from the other. An incredible fact about English is that it retains many of the words developed in its lexicon. Some words do become obsolete and are dropped forever. Most, however, remain and develop nuances that expand for the writer and speaker the opportunities for expression and expressiveness.

For these reasons, a synonym dictionary must be used with caution. Even though two words may be quite similar in meaning, the substitution of one for the other may not always be appropriate, and the writer's intent may be ill served by his failure to select the *mot juste*. *The Synonym Finder* contains more words than any book of its kind — more than 1,500,000. Sometimes, it will be consulted to find a word that will lend variety to the user's language; other times it will be consulted to remind the user of the temporarily lost word or expression that was "right on the tip of his tongue." In either case, it should be used with understanding.

Every effort has been made to make this book as accurate, as complete, and as easy to use as possible. Inevitably, a user may disagree with the treatment given a particular word. In that case, he is urged to consult a major dictionary where he is likely to find fuller information on the word than *The Synonym Finder* can be expected to offer. The nature of language and the behavior of words defy precision in the preparation of a work like *The Synonym Finder*. The editors have often had to make admittedly arbitrary decisions on word inclusion and placement. It is to be hoped, however, that among the many related words offered, the user will find several that suit his subject and his context.

A Note on the Style of THE SYNONYM FINDER

The Synonym Finder follows dictionary format. Entries are arranged alphabetically, with all appropriate parts of speech included under a single headword. Homographs — words spelled identically but of different origins — are entered separately with an identifying superior number.

Word listings have been organized numerically according to definition and major semantic groups; further discriminations are shown within these groups by separating subgroups by semicolons.

Usage levels are indicated by appropriate labels, such as *Slang*, *Informal*, etc.; technical or specialized words are identified by a field label such as *Chemistry*, *Nautical*, etc. In addition, gist information (*enclosed in parentheses*) is often included to help the user avoid inappropriate choices.

All gist and usage information appears before the word to which it applies, and applies to that immediately following word only, unless otherwise clearly indicated (e.g., *Both Inf.*, *All Sl.*). Foreign words and phrases as yet unassimilated into English are appropriately labeled and italicized.

In most cases, usage or technical labels have been written in full (e.g., *Archaic*, *Literary*). Common and easily understood abbreviations that have been employed are listed below. The labels *Informal* and *Slang*, when written in full before an entire listing, refer to the entry headword, rather than to the synonyms that follow. When abbreviated (*Inf.* or *Sl.*), the labels, like others in *The Synonym Finder*, refer to the following word.
